

# CHIKARA<sup>TM</sup>

## A new residual herbicide from Belchim Crop Protection

**CHIKARA<sup>TM</sup> Weed Control** contains 25% w/w flazasulfuron and is formulated as a water dispersible granule. This is an ideal replacement for diuron and diuron mixtures and will provide farmers, nurserymen and those involved in maintaining weed-free areas in amenity and industrial situations with a useful broad-spectrum pre-emergence residual herbicide for the control of a range of broad-leaved weeds and grasses. Flazasulfuron is Annex I listed and belongs to the mode of action group B (ALS inhibitor).

### Pack size & use recommendations

**CHIKARA<sup>TM</sup> Weed Control** is supplied in a 50g plastic container with a measuring cap.

**CHIKARA<sup>TM</sup> Weed Control** is applied at a rate of 150g/ha in 200-600 litres of water.

**CHIKARA<sup>TM</sup> Weed Control** knapsack rate is 5g in 20 litres, which treats 333 sqm.

Best results are obtained when applied in early spring before weeds germinate.

Tank mix with glyphosate if emerged weeds are present.

Residual activity can last for up to 5 months.

Situation of use	Maximum Individual dose (g product / ha)	Maximum number of treatments
Natural surfaces not intended to bear vegetation, permeable surfaces overlying soil and hard surfaces composed of railway ballast.	150	One per year

### Weed control

A wide range of both broad-leaved and grass weeds are susceptible to **CHIKARA<sup>TM</sup> Weed control** (consult the **CHIKARA<sup>TM</sup>** leaflet for more information)

### Care for the environment and use

Do not contaminate water. **CHIKARA<sup>TM</sup>** is a LERAP B pesticide.

Do not store mixed up spray solution in the sprayer/knapsack

Wash out the sprayer/knapsack with a recognised Ammonia based cleaning agent after use

**For further details please refer to the CHIKARA<sup>TM</sup> Weed Control label, product leaflet (found on the Belchim website) or contact Belchim Crop Protection Ltd directly.**
